Key Rating Drivers

Support Drives Ratings: The ratings of Kuveyt Turk Katilim Bankasi A.S (Kuveyt Turk) are driven by support from its 62.2% owner, Kuwait Finance House (K.S.C.P.) (KFH, A+/Stable/bb+). Fitch Ratings believes support would be forthcoming based on the bank's ownership by, integration with and strategic importance to its parent, and the support record. Kuveyt Turk accounts for about 26% of KFH's assets, but the cost of support should be manageable for KFH, in our view, given the latter's own access to support from the Kuwaiti authorities.

Country Ceiling Constraint: The bank's Long-Term Foreign-Currency (FC) Issuer Default Rating (IDR) is constrained by Turkey's Country Ceiling of 'BBB-'. Its Long-Term Local-Currency IDR also takes into account Turkish country risks.

Limited Franchise: Kuveyt Turk had a market share of 1.8% of banking sector assets at end-9M17. However, it is ranked first by assets in participation banking, which offers reasonable long-term growth prospects given the segment's strategic importance to the Turkish authorities.

Fairly High Risk Appetite: Credit risk is heightened by above-sector-average FC financing (end-9M17: 36%), a large share of which consists of riskier FC-indexed financing. Many FC borrowers are likely to be unhedged or weakly hedged SMEs, in our view.

Below-Average NPFs: Kuveyt Turk reported a 2.4% non-performing financing (NPF) ratio at end-9M17, which is below the sector average. However, this should be considered in view of its fairly high regulatory group 2 watch list financing (3% of gross financing, of which nearly half had been restructured), high share of FC financing (given potential further Turkish lira depreciation) and significant construction exposure (end-9M17: 20% of gross financing). Specific reserve coverage of NPFs of 83% is higher than both peer group and sector averages.

Good Liquidity: The bank's financing/customer deposits ratio (end-9M17: 100%) significantly outperforms the sector average, reflecting its solid deposit base. FC wholesale funding is below the sector average (end-9M17: 17% of total funding), although still fairly high.

However, refinancing risk is mitigated by the presence of KFH, while Kuveyt Turk's FC liquid assets were adequate to cover non-deposit liabilities due within a year at end-1H17. Liquidity is supported by the high share of monthly amortising financing (equal to about 90% of gross financing) on the bank's balance sheet.

Adequate Capitalisation: The bank's Fitch Core Capital (FCC) ratio of 13.2% at end-9M17 is adequate, the quality of its capital is good, and buffers remain sufficient to absorb moderate shocks. However, capital ratios are sensitive to further depreciation of the lira (given high FC lending) and higher-than-expected NPF growth. The equity/assets ratio is below the sector average, resulting in fairly high leverage, reflecting the lower risk-weighting applicable to participation financing (where the risk is shared by deposit holders).

Rating Sensitivities

Parent Support: A change in the ability (in case of a multi-notch downgrade) or willingness of KFH to provide support could result in a downgrade of the bank's IDRs.

Risk Appetite and Franchise: A Viability Rating (VR) downgrade could result from a marked deterioration in the operating environment or a weakening of the bank's asset quality, capital or FC liquidity. A VR upgrade could result from franchise expansion or a reduction in risk appetite.

Operating Environment

Turkey's ratings reflect external financing vulnerabilities, pronounced political and geopolitical risks, high inflation and macroeconomic volatility. This is balanced against low public debt ratios backed by a long commitment to fiscal stability and strong growth performance. Structural indicators are generally superior to peers.

Company Profile

Kuveyt Turk is majority-owned (62%) by KFH. The second-largest shareholder (19%) is the General Directorate for Foundations, an arm of the Turkish government that is the majority owner of *Turkiye Vakiflar Bankasi T.A.O.* (BB+/Stable) and *Vakif Katilim Bankasi A.S.* The Islamic Development Bank, whose mandate is to encourage sharia-compliant business, and the Public Institution for Social Security, a Kuwaiti pension and social security vehicle, each own a further 9%. The remaining 1% of shares are widely held.

Limited Domestic Franchise

Kuveyt Turk is an Islamic bank focusing on traditional banking activities in the Turkish market. Financing made up 67% of its total assets at end-1H17 and was split into retail (19%), SMEs (28%), commercial (41%) and corporate (12%). Murabaha financing (cost-plus financing) makes up 95% of financing and the remainder of financial leasing. It came later to the Credit Guarantee Fund (CGF) than peers but had extended TRY2.5 billion of CGF financing (equal to 7% of total gross financing) by end-1H17.

It was the largest participation bank (out of five) within the participation banking segment, which accounts for 5% of total banking sector assets at end-1H17. It had a 37% share of participation segment assets at end-1H17, but was ranked only 11th by total sector assets with a 1.8% share (including 1.7% in total sector financing and 2.3% in sector deposits).

Kuveyt Turk also has a small banking subsidiary in Germany that offers Islamic banking services primarily to retail customers. Its contribution to group assets and income is likely to remain limited.

At end-9M17, Kuveyt Turk had 398 branches in Turkey. It aims to increase this to about 460 by 2020, which will give it widespread coverage in its targeted areas. Branches are mainly in the cities but the bank is not active in the south east of the country.

Revenue is highly reliant on net financing income (72% of gross revenue in 1H17) and fee income is limited.

Management and Strategy

Stable Management

Management has a good degree of depth, stability and experience. Most members of senior management have worked at the bank for more than ten years.

KFH appoints five of the bank's supervisory board's nine members. Kuveyt Turk's chief executive also sits on the board as one of the KFH representatives. The remaining board members are appointed by the Turkish General Directorate for Foundations (two), the Islamic Development Bank (IDB: AAA/Stable) (one) and the Kuwaiti Public Institution for Social Security (one).

Growth Strategy

The bank aims to be among the top 10 Turkish banks by total assets and profitability by 2020. To some extent it can be considered opportunistic in its approach, but since 2016 it has revised its growth strategy and reduced its growth targets in line with macro developments.

Nevertheless, it targets 20% growth yoy by end-2018 with financing growth at a similar rate,

Related Criteria

[Global Bank Rating Criteria](#)
(November 2016)

implying a financing book size of about TRY44 billion by end-2018. It plans to fund loan growth through customer deposits. It also plans a capital increase in 2019, with a possible IPO and capital increase depending on market conditions.

Digitalisation is a strategic area for the bank with a primary focus on mobile banking, which accounts for 70%-80% of the bank's retail activities. The bank has 40 digital branches where customers can collect deposits and receive some financing services.

Risk Appetite

Underwriting Standards

Kuveyt Turk operations are centralised in terms of its credit applications but ultimate authority lies with credit committees. Discretionary lending limits depend on several factors, including the customer's internal rating, the amount of the proposed financing and the collateral.

The financing book is mostly monthly amortising, which helps with the detection of asset-quality problems. Only large corporate loans typically project finance loan loans (5.2% of total portfolio) have repayment structures that amortise more slowly. The average tenor of the bank's gross financing portfolio is only 18-20 months, driven by project finance, SME financing and residential mortgages.

Project finance consists 95% of energy projects and the typical tenor is eight to 10 years. The portfolio is diversified by borrower (the average ticket size is about USD5 million-USD10 million) and projects relate mainly to wind power and renewable small solar plants, although the bank has one big-ticket hydroelectricity plant exposure (equal to USD100 million). Kuveyt Turk has a specialist project finance team. Projects generally benefit from a floor price set in US dollars and guaranteed by the government. The bank reports no NPFs in this portfolio although it has restructured some projects due to project overruns.

Collateralisation of the total portfolio makes up 50%-55% of mortgages. Collateral in the corporate and commercial segments is more limited than in the SME segment.

Single-name concentration remains moderate. The top 25 exposures were equivalent to 77% of FCC, or 9% of gross financing, at end-1H17. All exposures were performing and none was to related parties.

Off-balance-sheet items are quite high and amounted to 13.1x FCC at end-1H17. The majority (80%) consisted of committed credit lines. However, risks are mitigated as 90% of committed credit lines are revocable.

High Construction Sector Exposure

Exposure to the risky construction and real estate (CRE) industry is high, amounting to TRY7 billion, or 20% of gross financing (168% of FCC), at end-1H17. This is at the sector limit for this type of financing. The NPF ratio in construction sector is higher (3.4% at end-1H17) than in the rest of portfolio and construction NPFs contributed 25% to total NPFs at end-1H17. Exposures typically consist of working capital financing or performance guarantees, while the bank avoids real-estate development financing, aside from some government-related infrastructure projects.

High FC Lending

We consider Kuveyt Turk's risk appetite to be fairly high due to its aggressive growth strategy and above-sector-average level of FC financing (37% of gross financing at end-1H17). As a small bank with a customer base likely to be sensitive to economic swings, we believe that not all customers will be fully hedged. Furthermore, FC-indexed financing was equivalent to a 20% of total gross financing at end-1H17. Fitch believes such loans are likely to be extended to more risky customers who are not eligible to receive pure FC loans.

Moderate Market Risk

The bank's policy is to maintain a broadly flat structural FC position (on- and off-balance sheet) through the use of hedging instruments. However, it is indirectly exposed to exchange-rate risk as a result of high FC financing exposure given that not all borrowers are likely to be fully hedged or may be only weakly hedged. Net finance risk (interest-rate risk) is moderate despite the bank's high share of monthly amortising loans. At end-1H17, the bank calculated that a regulatory shock of a +500bp and -400bp in the lira interest rate and +/-200bp in FC would have resulted in a 5% change to the bank's equity.

Financial Profile

Asset Quality

Below-Sector-Average NPFs

Asset-Quality Indicators

(%)	1H17	2016	2015	2014
Growth of gross financing	14.0	11.1	26.6	28.3
Impaired financing/gross financing	2.5	2.4	1.7	2.2
Reserves for impaired financing/impaired financing	83.5	78.4	72.4	85.0
Impaired financing less reserves for impaired financing/Fitch Core Capital	3.4	4.2	3.8	2.4
Financing impairment charges/average gross financing	2.0	1.3	1.3	1.0

Source: Kuveyt Turk's financial statements, Fitch

Kuveyt Turk's NPF ratio was almost flat at 2.45% at end-1H17, below peers and the sector despite its high SME exposure (28% of total financing). Its NPF origination/average performing financing ratio was also broadly flat at 1.8%, but should be considered in light of strong financing growth (up 14%) in 1H17. Kuveyt Turk's level of collections is low. The bank recovered just TRY49 million in 1H17 (2016: TRY150 million), equivalent to 11% of end-1H17 NPFs.

Watch-list financing (classified as "under close monitoring") fell to 4.3% of gross financing at end-1H17 (end-2016: 5.0%; end-2015: 4.4%), due to rapid growth in 1H17. Almost two-thirds of Group 2 financing was restructured at end-1H17. Fitch views Group 2 financing share as high and indicating potential asset-quality deterioration.

Impaired financing was 83.5% covered by specific reserves at end-1H17, above the sector average of 78%. In addition, the bank holds general reserves on the liabilities side of the balance sheet. Taking these into account, total reserves coverage of NPFs increased to 121%.

Earnings and Profitability

Stable Earnings Performance

Performance Indicators

(%)	1H17	2016	2015	2014
Net financing income/average earning assets	4.8	4.8	4.9	4.9
Non-financing expense/gross revenue	46.5	49.9	53.4	54.9
Financing and securities impairment charges/pre-impairment operating profit	45.6	38.0	38.3	28.6
Operating profit/average total assets	1.6	1.6	1.4	1.6
Operating profit/risk-weighted assets	18.9	19.0	16.7	17.3
Net income/average equity	14.1	15.5	13.1	13.7

Source: Kuveyt Turk's financial statements, Fitch

The bank's profitability ratios have been stable and return on equity (ROE) has hovered between 13% and 15% for several years. Like its peers, revenue is concentrated. Net financing income dominates while net fees account for under 10%.

Kuveyt Turk has one of the lowest costs of customer deposits in the Turkish banking sector (1H17: 3.2%; sector average: 5.7%). This is explained by the bank's high share of demand deposits (about 40% of the total), including gold accounts (where the bank is ranked third), which constitute a zero cost source of funding.

Cost growth at Kuveyt Turk has historically been slightly higher than inflation (1H17: 11%) reflecting that the bank is in its growth phase. Nevertheless, its cost/assets ratio came down to 2.5% at end-1H17 from 2.8% at end-2013 as the bank has scaled up its operations. Its cost/income ratio has improved, although it remains above the sector average.

Operating return on equity was at 19% at end-1H17 (end-2016: 19%), which compares favourably with peers. Pre-impairment profitability is solid and amounted to 35% of average equity and 4% of gross financing at end-1H17. The bank's cost of risk ratio has been fairly stable (about 1% of gross loans since 2012), but rise sharply in 1H17 due to the increase in the bank's reserves coverage ratio.

Capitalisation and Leverage

Adequate Capitalisation

Capital Ratios

(%)	1H17	2016	2015	2014
Fitch Core Capital/weighted risk	13.4	12.3	12.5	13.3
Total regulatory capital ratio	17.6	18.2	14.2	15.2
Tangible common equity/tangible assets	7.9	8.0	7.9	8.8
Core Tier 1 regulatory capital ratio	13.3	12.3	12.4	13.2
Internal capital generation	13.6	14.5	12.3	11.0

Source: Kuveyt Turk's financial statements, Fitch

Kuveyt Turk's growth has consistently outstripped internal capital generation, with the exception of 2016. Capital is good quality with a high share of Tier 1 capital. The bank's FCC ratio of 13.4% at end-1H17 compares well with small bank peers. Internal capital generation is reasonable and the net NPFs/FCC ratio is also low.

The bank's total capital adequacy ratio (CAR) fell in 1H17 but was still a reasonable 17.6% at end-1H17. Its minimum internal total CAR target is 14%. The total capital ratio has been supported by the issuance of sub-debt (USD350 million in 2016), which provides a hedge against lira depreciation as it is in FC. Islamic banks are able to offset a portion of their risk-weighted assets thanks to the discount rate applicable to participation finance whereby the risk is shared by deposit holders. Consequently, the bank's risk-weighted asset density is lower than at conventional banks.

The bank's loss-absorption capacity metrics indicated an additional 6% of financing impairment reserves could be provided before breaching minimum target capital ratios at end-1H17. The bank is highly leveraged and its equity/assets ratio of 8.2% at end-1H17 (end-2016: 8.2%; end-2015: 8.2%) was higher than the sector average of 11.1%. Kuveyt Turk usually pays dividends but it has lowered the dividend since 2015.

Funding and Liquidity

Manageable Refinancing Risk, Good Liquidity

Key Funding and Liquidity Indicators

(%)	1H17	2016	2015	2014
Financing/customer deposits	96.0	96.4	98.7	99.9
Liquidity coverage ratio	209.2	121.0	170.1	n.a.
Customer deposits/total funding (excluding derivatives)	79.3	73.8	75.1	73.3

Source: Kuveyt Turk's financial statements, Fitch

The share of deposits against total funding (excluding derivatives) was a high 79% at end-1H17. The bank aims to increase deposits in line with loan growth. Retail depositors provide the majority of deposits. The deposit base is granular with 40% of deposits covered by the deposit insurance guarantee at end-1H17. Single-name concentration is also limited with the top 20 depositors making up 3.3% of deposits.

Like peers', deposits are short-term. At end-1H17, only 1% had contractual maturities longer than one year. However, about 40% of deposits were sight deposits, which constitute a cheap (zero-interest) deposit thanks to its interest sensitive customer base, but these are stable.

At end-1H17, wholesale funding (including interbank deposits) amounted to 21% of total funding (excluding derivatives). FC-denominated funding made up 92% of wholesale funding, similar to other banks. Parent funding, which consists of bilateral loans with a short-term maturity, made up 23% of this, or 5% of total funding. Adjusting for parent funding, wholesale funding constituted a still fairly high 16% of total funding (albeit below peers'). Other wholesale funding included funds borrowed including syndication loans, interbank loans and bilateral funding.

At end-1H17, short-term FC liabilities maturing within a year were fully covered by short-term FC liquid assets maturing within the same timeframe. FC liquid assets mainly comprised FC reserves placed with the central bank's reserve option mechanism facility and placements in foreign banks. FC liquidity could come under pressure in case of a prolonged market closure, but the presence of KFH mitigates this as Fitch believes that KFH would provide liquidity support to KTKB should it be required. Unused credit lines from KFH amounted to more than USD1 billion at end-1H17 (USD1.5 billion uncommitted limit, only USD400 million is used).

The bank's liquidity is underpinned by the structure of lending whereby 90% of financing amortises monthly. Kuveyt Turk has a small securities portfolio for liquidity management purposes. Its liquidity coverage ratio was 209% at end-1H17 significantly above to the regulatory limit of 80%. In FC, the ratio was 264%.

Support

IDRs Based on Support From KFH

Kuveyt Turk's Support Rating of '2' reflects Fitch's view of a high probability of support from KFH if needed based on its majority ownership, strategic importance to its parent and the record of support. Kuveyt Turk accounted for a high 26% of KFH's total assets at end-1H17. Given its size relative to its parent, Fitch believes that support would be forthcoming from the Kuwaiti authorities, on whose support KFH's ratings rely.

FITCH'S CODE OF CONDUCT, CONFIDENTIALITY, CONFLICTS OF INTEREST, AFFILIATE FIREWALL, COMPLIANCE, AND OTHER RELEVANT POLICIES AND PROCEDURES ARE ALSO AVAILABLE FROM THE CODE OF CONDUCT SECTION OF THIS SITE. FITCH MAY HAVE PROVIDED ANOTHER PERMISSIBLE SERVICE TO THE RATED ENTITY OR ITS RELATED THIRD PARTIES. DETAILS OF THIS SERVICE FOR RATINGS FOR WHICH THE LEAD ANALYST IS BASED IN AN EU-REGISTERED ENTITY CAN BE FOUND ON THE ENTITY SUMMARY PAGE FOR THIS ISSUER ON THE FITCH WEBSITE.

Copyright © 2017 by Fitch Ratings, Inc., Fitch Ratings Ltd. and its subsidiaries. 33 Whitehall Street, NY, NY 10004. Telephone: 1-800-753-4824, (212) 908-0500. Fax: (212) 480-4435. Reproduction or retransmission in whole or in part is prohibited except by permission. All rights reserved. In issuing and maintaining its ratings and in making other reports (including forecast information), Fitch relies on factual information it receives from issuers and underwriters and from other sources Fitch believes to be credible. Fitch conducts a reasonable investigation of the factual information relied upon by it in accordance with its ratings methodology, and obtains reasonable verification of that information from independent sources, to the extent such sources are available for a given security or in a given jurisdiction. The manner of Fitch's factual investigation and the scope of the third-party verification it obtains will vary depending on the nature of the rated security and its issuer, the requirements and practices in the jurisdiction in which the rated security is offered and sold and/or the issuer is located, the availability and nature of relevant public information, access to the management of the issuer and its advisers, the availability of pre-existing third-party verifications such as audit reports, agreed-upon procedures letters, appraisals, actuarial reports, engineering reports, legal opinions and other reports provided by third parties, the availability of independent and competent third-party verification sources with respect to the particular security or in the particular jurisdiction of the issuer, and a variety of other factors. Users of Fitch's ratings and reports should understand that neither an enhanced factual investigation nor any third-party verification can ensure that all of the information Fitch relies on in connection with a rating or a report will be accurate and complete. Ultimately, the issuer and its advisers are responsible for the accuracy of the information they provide to Fitch and to the market in offering documents and other reports. In issuing its ratings and its reports, Fitch must rely on the work of experts, including independent auditors with respect to financial statements and attorneys with respect to legal and tax matters. Further, ratings and forecasts of financial and other information are inherently forward-looking and embody assumptions and predictions about future events that by their nature cannot be verified as facts. As a result, despite any verification of current facts, ratings and forecasts can be affected by future events or conditions that were not anticipated at the time a rating or forecast was issued or affirmed.

The information in this report is provided "as is" without any representation or warranty of any kind, and Fitch does not represent or warrant that the report or any of its contents will meet any of the requirements of a recipient of the report. A Fitch rating is an opinion as to the creditworthiness of a security. This opinion and reports made by Fitch are based on established criteria and methodologies that Fitch is continuously evaluating and updating. Therefore, ratings and reports are the collective work product of Fitch and no individual, or group of individuals, is solely responsible for a rating or a report. The rating does not address the risk of loss due to risks other than credit risk, unless such risk is specifically mentioned. Fitch is not engaged in the offer or sale of any security. All Fitch reports have shared authorship. Individuals identified in a Fitch report were involved in, but are not solely responsible for, the opinions stated therein. The individuals are named for contact purposes only. A report providing a Fitch rating is neither a prospectus nor a substitute for the information assembled, verified and presented to investors by the issuer and its agents in connection with the sale of the securities. Ratings may be changed or withdrawn at any time for any reason in the sole discretion of Fitch. Fitch does not provide investment advice of any sort. Ratings are not a recommendation to buy, sell, or hold any security. Ratings do not comment on the adequacy of market price, the suitability of any security for a particular investor, or the tax-exempt nature or taxability of payments made in respect to any security. Fitch receives fees from issuers, insurers, guarantors, other obligors, and underwriters for rating securities. Such fees generally vary from US\$1,000 to US\$750,000 (or the applicable currency equivalent) per issue. In certain cases, Fitch will rate all or a number of issues issued by a particular issuer, or insured or guaranteed by a particular insurer or guarantor, for a single annual fee. Such fees are expected to vary from US\$10,000 to US\$1,500,000 (or the applicable currency equivalent). The assignment, publication, or dissemination of a rating by Fitch shall not constitute a consent by Fitch to use its name as an expert in connection with any registration statement filed under the United States securities laws, the Financial Services and Markets Act of 2000 of the United Kingdom, or the securities laws of any particular jurisdiction. Due to the relative efficiency of electronic publishing and distribution, Fitch research may be available to electronic subscribers up to three days earlier than to print subscribers.

For Australia, New Zealand, Taiwan and South Korea only: Fitch Australia Pty Ltd holds an Australian financial services license (AFS license no. 337123) which authorizes it to provide credit ratings to wholesale clients only. Credit ratings information published by Fitch is not intended to be used by persons who are retail clients within the meaning of the Corporations Act 2001.
